

25. July – Catamaran-Trip to Constance

Since July 2005 exist a new connection between the two cities Constance and Friedrichshafen: You can drive with modern Catamarans. The double trunk ships in lightweight construction way have some particularly protruding characteristics, which are particularly suitable for the use at the Bodensee: a small wave impact, very low sound emissions and low specific energy

consumption. We thought a lot of good reasons to spend the next extraordinary excursion with our American students. One day after their flight experiences we changed onto the water. We met at 12:45 o'clock at the harbor. All are there and they are all prepared for a shopping tour. No guidelines from the chaperones side

were expensed. Inside the catamaran we could have a feeling like sitting in an airplane. The composition of the seats was really the same and we had a screen for getting all necessary

information's. We passed the maximum depth of the lake with 254 m and after 45 minutes we reached our destination Constance. Our proposals for a small guided tour through Constance with the cathedral, the city hall and the several fountains disappeared without a trace. Doesn't matter, more own time available for the chaperones and family

Huster. Last announcement: please be back all at 17:45 o'clock for the backward drive to Friedrichshafen. The sunny weather changed, and a mist dropped down the temperature by a very high humidity. But it was ok to walk through the city or the shops.
